

Extend the evening. Every season.

Custom fire pits & outdoor fireplaces.

A fire feature transforms an outdoor space into a place you live. Golden Maple builds custom fire pits and fireplaces as permanent structural elements — integrated with your patio, seating walls, and lighting. Every gas connection is handled by our licensed gas fitter.

WHAT'S INCLUDED

- ✓ Custom design & layout integrated with your hardscape
- ✓ Structural stone or masonry construction
- ✓ Natural gas or propane connection — licensed gas fitter
- ✓ Integrated seating walls around the feature
- ✓ Proper drainage to prevent water pooling
- ✓ Coordination with overall hardscape & patio design

POPULAR ADD-ONS

- Built-in seating wall integration with cushion ledge
- Fire glass or lava rock finish options
- Spark screen & custom cover
- Gas shut-off key & valve access panel
- In-Lite accent lighting around the fire feature

From \$8,000

Design Package: \$2,000 — 100% credited to your build

- ✓ WSIB Certified

✓ \$5M Liability

✓ 10-Year Warranty

✓ 5.0★ Google

✓ Fixed-Price Quotes

WHY GOLDEN MAPLE

Gas-First Approach

We recommend natural gas or propane fire features for most clients — cleaner burn, no ash cleanup, instant on/off, and no wood storage required. In most Ontario municipalities, gas appliances also have fewer permit complications than wood-burning units.

Designed as Part of the Whole

A fire feature designed in isolation rarely looks right. We design fire pits and fireplaces as part of your overall outdoor living space — integrated with your patio, seating walls, and lighting for a cohesive result.

Licensed Gas Work, Always

Every gas connection is completed by our licensed gas fitter with permits pulled and inspections passed. You receive full documentation — required by your insurer and essential for resale.

Structural Masonry Construction

Our fire features are built from structural stone or masonry — not prefab inserts dropped into a paver ring. They're permanent, weather-resistant, and built to the same standard as the rest of your hardscape.

OUR PROCESS

01

Design & Placement

We determine the ideal location, size, and style based on your patio layout, seating needs, and gas line access. Design finalized through the Design Package.

02

Foundation & Gas Rough-In

Structural base built, gas line trenched and roughed in by licensed gas fitter. Permits pulled before work begins.

03

Masonry Construction

Stone or masonry structure built, seating walls integrated, drainage confirmed, and finish materials applied.

04

Gas Connection & Inspection

Gas fitter completes final connections, inspection passed, and feature tested. Full documentation provided at handoff.

FREQUENTLY ASKED QUESTIONS

Gas vs. wood-burning?

We recommend natural gas or propane. Gas burns cleaner, requires no wood storage, and turns on instantly. In many municipalities, gas appliances also face fewer permit requirements than wood-burning units.

Do I need a permit?

Gas appliances require a gas permit, which our licensed gas fitter handles. Wood-burning units may require building permits depending on your municipality. We manage the application process on your behalf.

Patio integration?

Ideally, the fire feature is designed alongside the patio to plan gas routing and seating walls as a unified system. For existing patios, we design an integration that looks intentional, not retrofitted.
