

Your space. After dark.

Professional In-Lite low-voltage systems.

Landscape lighting extends your outdoor space into the evening and transforms how your property looks from the street. Golden Maple installs In-Lite low-voltage LED systems — the professional standard for landscape lighting in Canada. Every installation is designed as part of the overall outdoor environment, with wiring buried cleanly and fixtures placed for architectural effect.

WHAT'S INCLUDED

- ✓ In-Lite low-voltage LED fixture selection & installation
- ✓ Pathway, uplighting & feature accent lighting
- ✓ Timer & smart control integration
- ✓ Weatherproof wiring & junction boxes rated for burial
- ✓ Full integration with hardscape design & layout

POPULAR ADD-ONS

- Step & wall lighting integrated into hardscape
- Fire feature accent & perimeter lighting
- Driveway & entry lighting for curb appeal
- Smart zone controls — app or timer-based
- Seasonal colour options (select fixture lines)

From \$5,000

Design Package: \$2,000 — 100% credited to your build

✓ WSIB Certified

WHY GOLDEN MAPLE

In-Lite: The Professional Standard

In-Lite is a Dutch-engineered low-voltage LED system used by professional landscape contractors across North America. Fixtures are rated for extreme temperatures and built to last — unlike big-box alternatives that corrode and fail within a few seasons.

Fully Integrated with Hardscape

When lighting is planned alongside the hardscape, wiring is buried cleanly, junction boxes are hidden in walls, and step lights are set in stone — not surface-mounted as an afterthought.

Designed, Not Just Installed

Lighting placement is a design decision. We plan fixture locations, beam angles, and zone groupings as part of the overall outdoor design — so the result looks architectural, not like a series of random spotlights.

Low Maintenance by Design

In-Lite low-voltage LED systems require minimal maintenance. The annual requirement is a simple connection check — no bulb replacements, no corrosion issues, no system failures from a single point of failure.

OUR PROCESS

01

Lighting Design

Fixture placement, zone groupings, and control strategy mapped as part of the overall outdoor design. Plan finalized through the Design Package.

02

Wiring & Conduit

Wiring routes buried during hardscape construction — the cleanest possible installation with no surface conduit.

03

Fixture Installation

In-Lite fixtures installed, aimed, and secured. Junction boxes set in walls or buried at grade. Transformer and controls mounted.

04

Programming & Handoff

Timer and smart controls programmed. Full walkthrough of zones, controls, and seasonal adjustment provided at handoff.

FREQUENTLY ASKED QUESTIONS

Why In-Lite vs. big-box lighting?

Big-box systems use lower-grade materials and plastic components that corrode and fail within a few seasons. In-Lite fixtures are engineered for professional landscape installation — rated for -40°C to +60°C, built with marine-grade materials, and designed to last 20+ years with minimal maintenance.

What does installation involve?

When installed as part of a hardscape project, wiring is buried during construction — the cleanest result. For standalone projects on existing hardscapes, we route wiring through the most concealed paths available. We assess the best approach during the design consultation.

How much maintenance is required?

Very little. We recommend an annual connection check to ensure junction box connections remain secure. There are no bulbs to replace, and the LED drivers are rated for 50,000+ hours. We're happy to perform the annual check as part of our ongoing client relationship.
