

Culinary spaces. Built for the outdoors.

Custom-built for the way you live.

An outdoor kitchen built by Golden Maple is a permanent, structural addition to your property — not a modular cart or a summer project. We design and build custom outdoor kitchens from the ground up: structural framing, premium countertops, built-in appliances, licensed gas connections, and full integration with your patio and outdoor living space. The result is a kitchen that performs as well as your indoor one — and looks better.

WHAT'S INCLUDED

- ✓ Custom layout & design integrated with your outdoor space
- ✓ Structural concrete or steel base framing
- ✓ Premium countertop materials — porcelain, natural stone, or granite
- ✓ Built-in appliance integration (BBQ, side burners, fridge)
- ✓ Weatherproof cabinetry and storage solutions
- ✓ Proper drainage planning for countertops and base
- ✓ Full integration with existing or new hardscape

POPULAR ADD-ONS

- Pizza oven integration (wood-fired or gas)
- Outdoor sink & plumbing connection
- Bar seating with pony wall & countertop overhang
- In-Lite accent lighting throughout the kitchen area
- Pergola or shade structure overhead

From \$35,000

WHY GOLDEN MAPLE

Built to Last Outdoors

Outdoor kitchens fail when they're built like indoor kitchens. We use structural concrete or steel framing, weatherproof cabinetry, and materials rated for Ontario's freeze-thaw cycles — not residential-grade shortcuts.

Licensed Gas Work Included

All natural gas or propane connections are handled by our licensed gas fitter. Permits are pulled, inspections are passed, and you have documentation to satisfy your insurance provider.

Fully Integrated Design

Your outdoor kitchen is designed as part of your overall outdoor living space — not bolted on as an afterthought. It connects to your patio, lighting, and fire features as a unified environment.

Premium Countertop Selection

We work with porcelain, natural stone, and granite — materials that hold up to UV exposure, temperature swings, and heavy use. We'll help you select the right surface for your aesthetic and your climate.

OUR PROCESS

01

Design & Layout

On-site consultation, appliance selection, layout design, and material choices finalized through the Design Package.

02

Base Construction

Structural framing built in concrete or steel. Rough-in for gas, electrical, and plumbing completed before enclosure.

03

Countertop & Cabinetry

Countertops templated, fabricated, and installed. Weatherproof cabinetry fitted and sealed.

04

Appliances & Finish

Appliances installed and connected. Gas fitter completes connections and inspection. Final walkthrough and handoff.

FREQUENTLY ASKED QUESTIONS

What appliances do you supply vs. owner-supplied?

We can supply and install all appliances through our trade partners, or we can integrate owner-supplied appliances — your choice. We'll confirm rough-in requirements for any owner-supplied units during the design phase to ensure proper fit and connection.

Do you need a gas permit for an outdoor kitchen?

Yes. Any natural gas or propane connection requires a permit and must be completed by a licensed gas fitter. We handle the permit application and use our licensed gas fitter for all connections. You receive full documentation for your records and insurance provider.

How do I protect the kitchen in winter?

We design for Ontario winters from the start — proper drainage prevents water pooling and freeze damage, weatherproof cabinetry handles temperature swings, and we provide a winterization checklist. Most appliances simply need covers and a propane shutoff. We'll walk you through the process at handoff.
