

Restore the investment you've already made.

Professional cleaning & sealing.

Interlocking pavers are a long-term investment. Our restoration service brings your existing hardscape back to original condition: professional washing, Romex Ecofine joint sand, and high-performance sealer application.

★ We also offer this service to past Golden Maple clients as part of our ongoing relationship. If we built it, we know exactly what products were used and how to restore it properly.

WHAT'S INCLUDED

- ✓ Professional-grade pressure washing — full surface clean
- ✓ Polymeric sand removal & replacement where needed (Romex Ecofine)
- ✓ Joint re-sanding for weed suppression and stability
- ✓ High-performance sealer application — wet look or natural finish
- ✓ Inspection for shifting, drainage issues, or base concerns

POPULAR ADD-ONS

- Efflorescence treatment (white mineral deposit removal)
- Full polymeric sand replacement across entire surface
- Minor re-leveling of settled or shifted stones
- Drainage assessment & minor correction

From \$1,500

WHY GOLDEN MAPLE

We Know What Was Used

For past Golden Maple clients, we know exactly which products were installed and how to restore them properly. No guesswork, no incompatible sealers, no risk of surface damage from the wrong product.

Sealer Selection Matters

Not all sealers are equal. We use high-performance sealers rated for Ontario's freeze-thaw cycles — available in wet look (enhanced colour, slight sheen) or natural finish (matte, no colour change). We'll help you choose based on your stone and aesthetic.

Romex Ecofine — Professional Grade

We use Romex Ecofine polymeric sand — the same product we install in new construction. It's a professional-grade joint stabilizer that resists weeds, ants, and washout far better than hardware store alternatives.

Shoulder-Season Availability

Paver restoration is a shoulder-season service — available in spring and fall when our construction schedule allows. Book early to secure your spot before the season fills.

OUR PROCESS

01

Assessment

We inspect the surface for shifting, drainage issues, joint sand condition, and any areas requiring repair before restoration begins.

02

Cleaning

Professional-grade pressure washing removes all dirt, organic growth, and old sealer residue. Efflorescence treatment applied if needed.

03

Sand & Joints

Degraded polymeric sand removed, joints cleaned, and fresh Romex Ecofine sand installed and compacted into all joints.

04

Seal & Inspect

High-performance sealer applied in two coats. Final inspection completed and care instructions provided.

FREQUENTLY ASKED QUESTIONS

How often should pavers be sealed?

We recommend sealing every 3–5 years, depending on traffic, sun exposure, and the condition of the existing sealer. A simple water-bead test tells you when it's time — if water no longer beads on the surface, the sealer has worn through and it's time to reseal.

What's the difference between wet look and natural finish?

Wet look sealer enhances the colour of your pavers and leaves a slight sheen — similar to how stone looks when wet. Natural finish sealer provides the same protection with no colour change and a matte appearance. Both offer equivalent protection; the choice is purely aesthetic.

Can you restore old, neglected pavers?

In most cases, yes. Pavers that have been neglected for years — with heavy organic growth, degraded sand, and worn sealer — can typically be restored to near-new condition. We assess the surface before quoting to determine the scope of work required and confirm that restoration is the right approach versus replacement.
