

Structure meets elegance.

Engineered to hold for decades.

A retaining wall is one of the most structurally demanding elements in any landscape. Done correctly, it reshapes your property, controls erosion, creates usable outdoor space, and adds lasting value. Done incorrectly, it fails — often within a few seasons. Golden Maple builds retaining walls to engineering standards: proper base depth, geogrid reinforcement, integrated drainage, and premium materials. Every wall we build is designed to hold — and backed by a 10-Year structural warranty.

WHAT'S INCLUDED

- ✓ 12" minimum compacted aggregate base for structural stability
- ✓ Geogrid soil reinforcement on all walls over 600mm
- ✓ Integrated drainage systems — perforated pipe & granular backfill
- ✓ Laser leveling for plumb, level, and true alignment
- ✓ Premium coping & cap stones for a finished top edge
- ✓ Permit application handling (walls over 1m in Barrie require permits)
- ✓ 10-Year structural warranty

POPULAR ADD-ONS

- Natural stone veneer facing for a custom aesthetic
- Multi-level terracing with planting beds
- Custom staircase integration into wall structure
- In-Lite low-voltage accent lighting along cap line
- Garden bed foundations & raised planting areas

From \$15,000

Design Package: \$2,000 — 100% credited to your build

✓ WSIB Certified

✓ \$5M Liability

WHY GOLDEN MAPLE

Engineered Drainage Systems

Hydrostatic pressure is the #1 cause of retaining wall failure. Every Golden Maple wall includes a properly designed drainage system — perforated pipe, granular backfill, and weeping outlets — to eliminate pressure buildup behind the wall.

Geogrid Reinforcement

For walls over 600mm, we install geogrid soil reinforcement layers as required by engineering standards. This is non-negotiable for structural integrity and long-term performance.

Permit-Ready Expertise

Walls over 1 metre in Barrie and Simcoe County require building permits. We handle the application process, engineering documentation, and inspections on your behalf.

10-Year Structural Warranty

Our retaining walls are built to hold — and we back that with a decade of structural coverage. Movement, cracking, or failure is our responsibility to correct.

OUR PROCESS

01

Site Assessment & Design

We evaluate soil conditions, grade changes, and drainage requirements. Full design and permit application handled through the Design Package.

02

Excavation & Foundation

Deep excavation, compacted base installation, and drainage pipe placement before the first block is set.

03

Wall Construction

Block-by-block installation with geogrid layers, granular backfill, and laser-verified alignment at every course.

04

Cap, Grade & Inspect

Premium coping installed, site graded, drainage confirmed, and full structural inspection completed before handoff.

FREQUENTLY ASKED QUESTIONS

Do I need a permit for my retaining wall?

In Barrie and most of Simcoe County, retaining walls over 1 metre (approximately 3.3 feet) in height require a building permit. We handle the full application process, including any required engineering drawings, as part of our service.

What materials do you use?

We work with premium segmental retaining wall block systems — including Unilock, Techo-Bloc, and natural stone — selected based on the structural requirements, aesthetic goals, and site conditions of each project.

How long will a retaining wall last?

A properly engineered and installed retaining wall with adequate drainage should last 30–50+ years. The most common cause of premature failure is inadequate drainage — which is why we treat it as a non-negotiable part of every installation.
